Enzyme Immunoassays provide only a preliminary analytical test result. A more specific alternate chemical method must be used in order to obtain a confirmed analytical result. Liquid chromatography/mass spectrometry (LC-MS) is the preferred confirmatory method. Clinical consideration and professional judgment should be applied to any drug of abuse test result, particularly when preliminary positive results are used.

*This test was developed and its performance characteristics determined by Sigmund NJ LLP. It has not been cleared or approved by the Food and Drug Administration.
